

## **DidsonAppV5.ini file description**

- *What does the DidsonAppV5.ini do?*

The file DidsonAppV5.ini saves the current state (at application exit) of many application parameters and internal variables. The file is not saved if the application is exited while in Playback mode, so data acquisition settings are not overwritten by the current playback file settings. The file structure is appended as new functions are incorporated into the software. We consider the source code of the software as proprietary. If you have a specific need that can be fulfilled without exposing the source code, we will try to help you. The image file format (.ddf) is available for user inspection.
